

AWS CloudFormation provides a pain-free way to allow AWS users to quickly create and provision services in a repeatable, testable and auditable way. By publishing resources in the CloudFormation Registry, you provide AWS customers a friction-free way to include your services in their AWS solutions.

AWS CloudFormation Advance from Cloudsoft can help you curate, create, test and publish CloudFormation resources to be used by any AWS account in any region.

## WHO IS ADVANCE FOR?

AWS CloudFormation Advance is for technology providers whose services are used in the AWS cloud. Resources are the most important element of infrastructure as code for AWS developers. By making your commonly used resources available in the CloudFormation registry you make it easy for developers to include your solutions in their service templates.

But creating resources can take up your teams time, duplicate effort you've already made in Terraform and requires a learning curve to get started. AWS Cloudsoft Advance from Cloudsoft offers you a pain-free way to build up your library of provisioned resources quickly and with minimal effort. Our expert teams will create, test and publish resources for you.

## THE ADVANCE PROCESS

Customers trust CloudFormation to distribute approved applications, automate resource management across their organisation and ensure that services align with best practice and governance controls. The Advance Process from Cloudsoft supports you to choose, create, test and provision resources for your services.

### Curate & Choose

Cloudsoft will consult with you to identify the resources that you want to create:

- Defining common, repeatable resources;
- Evaluating current resources, e.g. Terraform resources
- Understanding linkages between resources

### Create

Cloudsoft will develop and document your resources:

- Creating Git repositories that will allow you to fully own the codebase after development.
- Building the resources in Java, Python, Go or Typescript.

### Test

Cloudsoft are experienced at testing using the AWS framework, ensuring resources are compliant to AWS standards.

We've also been testing upcoming frameworks so ensure your resources are future proofed.

### Provision

We publish resources for you or we can walk you through self-publishing to ensure resource are available to users ASAP.

### Support

Typically, Cloudsoft will transfer resources to you to manage the customer relationship at the point of publishing but we can also offer support packages for resources after publication.

## ADVANCE PACKAGES

Cloudsoft offer a number of packages for technology providers who wish to advance their CloudFormation journey and make more resources available to AWS users.

### Getting Started

- Research & Consultation
- Circa 10 resources created
- Testing
- Publication to Registry
- Documentation & Knowledge Transfer
- 35 days/ 245 hours of total consultation & developer time

**\$ 59,999**

### Builder

- Research & consultation
- Circa 30 resources created
- Testing
- Publication to Registry
- Documentation & Knowledge Transfer
- 60 days / 400 hours of consultation & developer time

**\$ 89,999**

### Bespoke

- Research & consultation
- Flexible number of resources
- Testing
- Publication to Registry
- Documentation & Knowledge Transfer
- Per Day consultation & developer time

**\$1,800 per day**

### Support

Annual or multi-year support for your published resources can be provided by Cloudsoft to fix bugs, accommodate API changes and more.

The above packages are illustrative, based on the median and average numbers of resources that technology providers provide on AWS and Terraform registries and can be customised. Advance is available on AWS Marketplace for customers who wish to purchase via their AWS Account.

## WHY CLOUDSOFT

Cloudsoft are a provider of choice for AWS , we've developed and tested CloudFormation resources across a wide range of the world's most used technology software providers, as well as building resources for AWS's own services.

We've worked alongside the AWS CloudFormation teams in developing the end-to-end process for resources. We've been an AWS Consulting Partner for a decade, helping a wide range of AWS customers to use CloudFormation resources in their well-architected, secure and cost efficient solutions, and have an exceptional reputation and world-class CSAT score.

We've helped a wide range of AWS customers to
